

Locking in Quality around the World

Miwa Lock Company, Japan's foremost lock manufacturer, has been designing, building and supplying electronic locks to the hospitality industry since 1980. When looking for a product where security and guest convenience count our ALH range of locks and operating systems hold the solution for you. All Miwa's products are built to meet and exceed the world's highest standards, from conception through to manufacture our dedicated engineering team ensure that the best possible product is produced without cutting corners. Whether you are looking for locks for a small or large, limited service or full service Miwa has the solution for your security needs.

The AL5H lock has passed the ANSI 156.25 lock standard making it a true Grade 1 electronic mortise lock which is manufactured in our ISO 9001, ISO14001 certified factories in Japan.

The ALH lock systems from a company where quality and service still counts.

A Hotel Manager's Dream....

Today's hoteliers expect much more than a lock that keeps their doors securely shut. The MIWA AL5H, with its smart card capability, is your building block to a comprehensive hotel security system. It provides you with unparalleled reliability today and unlocks the potential of your smart card applications tomorrow.

Designed to read magnetic cards, memory and processor smart cards. The AL5H combines superior mechanism with a state-of-the-art electronics package, offering you the benefits of:

Ease of use

the magnetic card reader within the lock is designed to read cards whether inserted slowly or quickly; better reading means less red light for the guests helping to enhance their stay at your property.

Guests' security

All of the AL5H lock cases have a 3/4 inch latch, 1 inch dead bolt and an anti-pick latch that prevents the lock case from being tampered with whilst the door is closed.

Lock Audit Trail

Each lock stores the last 600 transactions, for the average guest room this equates to over a months worth of entries. Each staff and guest card has a unique ID so all cards can be tracked back to time and date of use.

Staff Card Audit

Each time a staff card is used in a lock not only does lock record this transaction in its memory it also writes it back on to the staff card itself. Staff cards hold the last 100 door openings; this information can be audited to show exactly where and when it has been used.

The Future

All Miwa AL5H locks have a built in interface on the mother board for future upgrades such as wireless on line locking or energy management interfaces, thus protecting your investment.
