

WebLOG

Bring Your Team Together With A Smart, Easy-to-Use, Web-Based MOD Log.

“A web-based log is a great way to help management communicate better. Since WebLOG integrates with HotSOS, it’s another useful tool for recording guest feedback.”

Luis Segredo
President
MTech, Miami, FL.

Hotel Managers have always struggled with communicating important information about incidents and issues from shift to shift. That’s why the MOD log was created in the first place. Today, WebLOG offers an easy-to-use, web-based, MOD log that not only tracks issues, it also automatically communicates them so that they can be resolved in real time.

Easy Access From Anywhere, Anytime

On Duty Managers access WebLOG from any PC on the internet to enter information about what happened during their shift. All issues and incidents are tracked and available in a variety of reports for analysis allowing management to be more proactive and ensuring that nothing falls through the cracks after a shift change.

HotSOS Integration Helps Staff Communicate

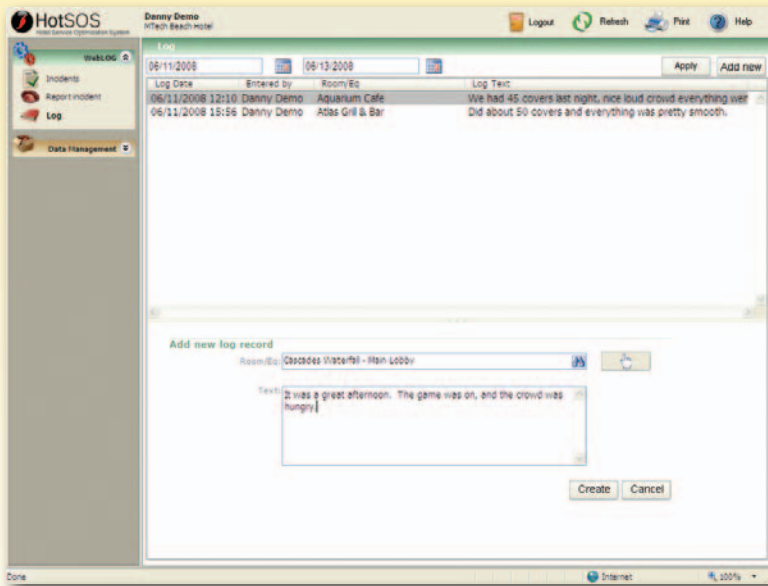

Since WebLOG is part of the HotSOS family, incidents logged are automatically communicated to the right person for action through the HotSOS business rules. No paper-based log ever did that before! WebLOG is the smart way to manage your MOD log.

Call us today or visit www.m-tech.com to learn more about how WebLOG can help your managers communicate better and improve the guest experience.

MTech

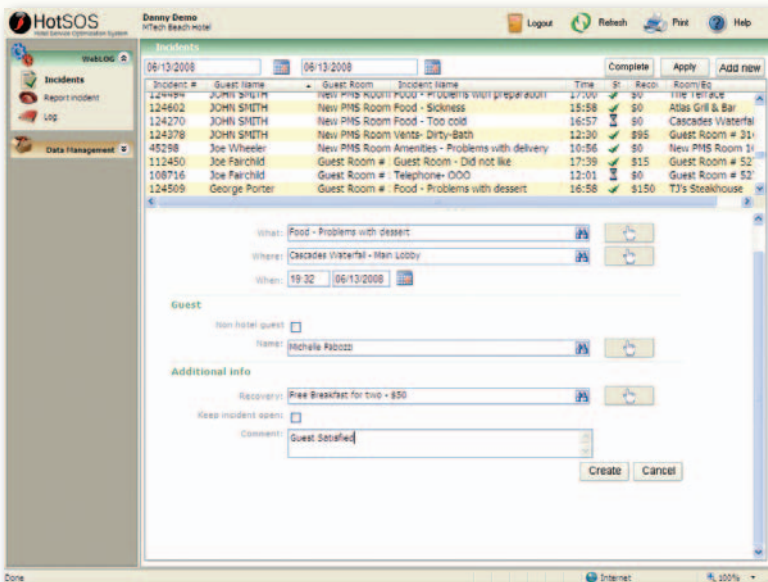

Smarter workflow. Better service.

WebLOG in Action

WebLOG's Intuitive Logbook Screen

With WebLOG, Managers can quickly enter incidents and events into the MOD log from any PC with web access.

Guest Incidents Aren't Just Logged. They're Resolved.

With a direct interface to HotSOS, guest incidents entered in WebLOG get dispatched immediately and automatically so staff can react swiftly to better serve your guests.
