

PRESS RELEASE

For Immediate Release

McLaren Custom Designs a Flexible Internet Billing Solution for The Geelong Conference Centre.

'Best of Breed' technology provider McLaren International, has integrated the Nomadix AG 3100 and their own Hotspot Manager (HSM) with Dimension Data's wireless network, delivering a customised Credit Card Portal for the Direct One payment gateway.

Australia, August 11, 2009 — McLaren International Pty Ltd today announced that it has successfully deployed a tailored Internet billing solution for the Geelong Conference Centre in Victoria. The solution presents the guest with options for Credit Card Billing, Internet Kiosk 'style' and charging direct to the Property Management System (PMS). Surrounded by 80 hectares of parkland, adjacent to the Geelong Botanic Gardens, and the East Geelong Golf course the GCC is a purpose built facility has 42 hotel-style serviced rooms plus 3 self-contained suites and 1 self-contained two-storey apartment, plus conferencing facilities accommodating up to 300 people. The spacious facility boasts state of the art technical equipment to meet any business need.

GCC General Manager Cathie Stahl said – "To compete in the business of conferencing, we have positioned the Geelong Conference Centre as a 'Cut-Above' the norm. Our facilities provide businesses the perfect out-of-office experience. Naturally our guests demand reliable, efficient and 'easy to access' Internet while visiting, which is why McLaren International's complete internet access gateway and billing solution, was the easy choice. Their technical team created a tailored billing application to cover all of our guest's requirements with a GCC branded portal allowing for signup via Credit Card, direct charge to Guest Folios and Internet Kiosk facilities. In addition, we have automatic reporting of daily transactions sent direct via email each day. The complete system has added a valuable revenue vertical to our business."

McLaren International Operations Director Matthew Watson added - "The superior scalability and reliability of the Nomadix system was the ideal choice for the GCC. Globally deployed, Nomadix offers an easy 'Plug & Play' functionality with an unprecedented 99.9% uptime. McLaren's own Hotspot Manager (HSM) software integrates perfectly with the Nomadix system to deliver straight forward and immediate creation of wireless user profiles. Designing a branded portal successfully completed the solution. This was another great example of McLaren's ability to integrate systems and deliver on their philosophy of 'Best of Breed' technologies.

Key elements of McLaren Internationals solution include:

-  Connecting users to providers to create value in public access networks...
• Nomadix Inc - Nomadix is a subsidiary of DOCOMO intertouch, providing internet solutions for the hospitality and public access market to create multi-use, multi-revenue networks that require Zero Configuration for end users wanting to access the internet.
